Performance Assistant

Task 'New OSS: Check TLS prot. version >= TLSv1.1 w.BEST-OPTION (RZ11)'

Application Component: XX-SER-NET

Purpose

Use this task to check TLS protocol version.

This task check the profile parameter `ssl/client_ciphersuites` and parameter value for enabling highest TLS protocol version with BEST-OPTION.

Dependencies

Note 510007

Example

Recommended Configuration of Available TLS Protocol Versions (required for enabling TLSv1.2)

- `ssl/client_ciphersuites = 150:PFS:HIGH::EC_P256:EC_HIGH`

For a SAP Solution Manager System 7.[012], please use the following value for `ssl/client_ciphersuites` instead:

- `ssl/client_ciphersuites = 918:PFS:HIGH::EC_P256:EC_HIGH`

Activities

Bit Number	Value	Description
Bit 1	1	"BC"- Option (accept SSL Version 2.0 CLIENT-HELLO / SSLv2Hello for TLSv1.x Handshake)
Bit 2	2	"BEST"- Option (activate highest available TLS protocol version, i.e. TLSv1.2 for CCL 8.4. 48+)
Bit 3	4	"NO_GAP"- Option (no gaps between TLS protocol versions; is forced to date)
Bit 4	8	Not defined
Bit 5	16	Allow blind sending of a client certificate (5.5.5pl36+ and all CCL 8.x.x)
Bit 6	32	"Strict protocol version configuration" option--do not automatically enable TLSv1.0 (recognized/supported only by CommonCryptoLib (CCL) 8.4.31 or higher)
Bit 7	64	SSLv3
Bit 8	128	TLSv1.0
Bit 9	256	TLSv1.1 (only with CommonCryptoLib (CCL) 8.4.31 or higher)
Bit 10	512	TLSv1.2 (only with CommonCryptoLib (CCL) 8.4.31 or higher)
Bit 11	1024	Not defined
Bit 12	2048	Not defined

Troubleshooting

If profile parameter `ssl/client_ciphersuites` is not enabled for highest TLS protocol version with BEST-OPTION, read note 510007 and change profile parameter value.
